

Bar Code Scanner (BCS) Set Up Instructions

SERVER END SET UP - Salesforce end

To install / connect the BCS module on the Salesforce Server side, visit [the link](#) from the side panel bullet titled "[Free AppExchange Installation URL](#)" under the "Details" tab at the [BCS App Exchange listing](#) at Salesforce.com and follow the wizard.

CLIENT SIDE APP SET UP - mobile phone and tablet app

Download and install the App from [Google Play](#).

Then click on the link titled "[Accessing SF Login Credentials](#)" and follow the instructions at the [BCS App Exchange listing](#) (under the "Details" tab) to access your 5 login credentials REQUIRED by Salesforce for security reasons.

Then, just scan virtually any bar code and then visit your SF Org to view the results.

For added detail, consider viewing the [BCS demo video](#) at the [BCS website](#).

NOTICE

Instances that trigger auto-log-out of your Salesforce account include moving between different WiFi signals and cell phone towers.

The BCS can be programmed by our office to remain logged into your Salesforce Org so you don't have to keep logging back in once the allotted time set by Salesforce expires.

Contact our office today to discuss the possibility of programming the apps today.
